## **DETAILED ACTION**

### ***Current Status***

Claims 1-12 are pending in the application.

### ***Election/Restrictions***

Applicant's election without traverse of Group I (claims 1-12) in the reply filed on 10/1/05 is acknowledged.

Applicants are reminded of their right to file divisional applications to the non-elected claims.

Applicants' are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

### ***Examiner's Amendment***

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Cutts on 11/28/05.

The Application has been amended as follows:

Claims 13- 30 have been cancelled.

***Allowed Claims***

Claims 1-12 are allowable over the prior art of record.

***Reason For Allowance***

The following is an examiner's statement of reasons for allowance: Applicants' claim a process for producing an organic hydroperoxide comprising reacting an organic compound having at least one carbon-hydrogen bond capable of being oxidized to a hydroperoxide-carbon bond with oxygen in the presence of a catalyst comprising a transition metal oxides of empirical formulation in the anhydrous state

where M1 is a transition metal selected from the set Mn, Co, Cr, V, Mo, Fe, Cu, and Ni; wherein all the variables are as defined in the claims. The process was neither found to be obvious nor anticipated by the prior art of record.

The closest prior arts are Wu et al., (US 4,201,875) and Bond et al., (US 5,504,256). Wu et al. teach a process for making organic hydroperoxide wherein the catalyst comprising metallic silver supported upon an inorganic support selected from the oxides and carbonates of metals of Group IIa, IIb, IIIb and IVb. Bond et al. on the other hand, teach a process for making organic hydroperoxide wherein the catalyst employed is an oxo (hydroxo) bridged tetranuclear metal complex having a mixed metal core while applicant claim a catalyst comprising a anhydrous transition metal oxides. The differences are not readily apparent and would not have been suggested to one of ordinary skill.
